

POWER RATING UPDATE 2020

ADEPTA SORORITAS

Welcome to the 2020 Power Rating update for Adepta Sororitas. This update contains the most up-to-date Power Ratings for units that should be used in your games of Warhammer 40,000.

Since writing the latest edition of Warhammer 40,000 we have been working tirelessly to review and update the Power Ratings of every single unit in the 41st Millennium in order to take into account all the changes introduced. For example, we have introduced Blast weapons, overhauled how battlefields and terrain function, and let's not forget that vehicles and monsters have become substantially better – being able to move and fire heavy weapons at full effect, and even shoot while enemy models are within Engagement Range of them! I'm sure you can see that together, these changes affect the relative efficacy of certain models and weapons, hence the need for a review. This monolithic task would have been impossible without the dedication and stalwart advice of our playtesting teams, who have our eternal thanks.

The Power Ratings listed in this update replace any published previously, and should be used in your games. A unit's Power Rating is based on the number of models in that unit; to determine its Power Rating, simply look at the entry for that unit and the corresponding Power Rating for the number of models in that unit. Remember that an Understrength unit has the same Power Rating as a minimum sized unit.

Sometimes, a unit's entry will have a Power Rating that is calculated 'per model'. Where this is the case, the Power Rating of the unit is simply this number multiplied by the number of models in that unit. Rarely, you will see an entry whose Power Rating is calculated as '+X per model'. In these cases, the Power Rating is equal to the minimum size, and then for each additional model above the minimum squad size included in that unit, increase that unit's Power Rating by the amount shown.

Occasionally, a unit will have two separate entries. This typically happens when a unit has the option to be equipped with particular wargear, such as jump packs or wings. Where this is the case, just be sure to use the entry that corresponds to the wargear equipped on your unit. If a unit can contain any models that have a substantially different power, these will be denoted within the entry by naming that model, which will have a '+X per model' on its line. Each time you include such a model in a unit, then its Power Rating is increased by the amount shown.

POWER RATING UPDATE 2020

CHAOS KNIGHTS

Welcome to the 2020 Power Rating update for Chaos Knights. This update contains the most up-to-date Power Ratings for units that should be used in your games of Warhammer 40,000.

Since writing the latest edition of Warhammer 40,000 we have been working tirelessly to review and update the Power Ratings of every single unit in the 41st Millennium in order to take into account all the changes introduced. For example, we have introduced Blast weapons, overhauled how battlefields and terrain function, and let's not forget that vehicles and monsters have become substantially better – being able to move and fire heavy weapons at full effect, and even shoot while enemy models are within Engagement Range of them! I'm sure you can see that together, these changes affect the relative efficacy of certain models and weapons, hence the need for a review. This monolithic task would have been impossible without the dedication and stalwart advice of our playtesting teams, who have our eternal thanks.

The Power Ratings listed in this update replace any published previously, and should be used in your games. A unit's Power Rating is based on the number of models in that unit; to determine its Power Rating, simply look at the entry for that unit and the corresponding Power Rating for the number of models in that unit. Remember that an Understrength unit has the same Power Rating as a minimum sized unit.

Sometimes, a unit's entry will have a Power Rating that is calculated 'per model'. Where this is the case, the Power Rating of the unit is simply this number multiplied by the number of models in that unit. Rarely, you will see an entry whose Power Rating is calculated as '+X per model'. In these cases, the Power Rating is equal to the minimum size, and then for each additional model above the minimum squad size included in that unit, increase that unit's Power Rating by the amount shown.

Occasionally, a unit will have two separate entries. This typically happens when a unit has the option to be equipped with particular wargear, such as jump packs or wings. Where this is the case, just be sure to use the entry that corresponds to the wargear equipped on your unit. If a unit can contain any models that have a substantially different power, these will be denoted within the entry by naming that model, which will have a '+X per model' on its line. Each time you include such a model in a unit, then its Power Rating is increased by the amount shown.

For example, we have introduced Blast weapons, overhauled how battlefields and terrain function, and let's not forget that vehicles and monsters have become substantially better – being able to move and fire heavy weapons at full effect, and even shoot while enemy models are within Engagement Range of them! I'm sure you can see that together, these changes affect the relative efficacy of certain models and weapons, hence the need for a review. This monolithic task would have been impossible without the dedication and stalwart advice of our playtesting teams, who have our eternal thanks.

The Power Ratings listed in this update replace any published previously, and should be used in your games. A unit's Power Rating is based on the number of models in that unit; to determine its Power Rating, simply look at the entry for that unit and the corresponding Power Rating for the number of

models in that unit. Remember that an Understrength unit has the same Power Rating as a minimum sized unit.

Sometimes, a unit's entry will have a Power Rating that is calculated 'per model'. Where this is the case, the Power Rating of the unit is simply this number multiplied by the number of models in that unit. Rarely, you will see an entry whose Power Rating is calculated as '+X per model'. In these cases, the Power Rating is equal to the minimum size, and then for each additional model above the minimum squad size included in that unit, increase that unit's Power Rating by the amount shown.

Occasionally, a unit will have two separate entries. This typically happens when a unit has the option to be equipped with particular wargear, such as jump packs or wings. Where this is the case, just be sure to use the entry that corresponds to the wargear equipped on your unit. If a unit can contain any models that have a substantially different power, these will be denoted within the entry by naming that model, which will have a '+X per model' on its line. Each time you include such a model in a unit, then its Power Rating is increased by the amount shown.

POWER RATING UPDATE 2020

CRAFTWORLDS

Welcome to the 2020 Power Rating update for Craftworlds. This update contains the most up-to-date Power Ratings for units that should be used in your games of Warhammer 40,000.

Since writing the latest edition of Warhammer 40,000 we have been working tirelessly to review and update the Power Ratings of every single unit in the 41st Millennium in order to take into account all the changes introduced. For example, we have introduced Blast weapons, overhauled how battlefields and terrain function, and let's not forget that vehicles and monsters have become substantially better – being able to move and fire heavy weapons at full effect, and even shoot while enemy models are within Engagement Range of them! I'm sure you can see that together, these changes affect the relative efficacy of certain models and weapons, hence the need for a review. This monolithic task would have been impossible without the dedication and stalwart advice of our playtesting teams, who have our eternal thanks.

The Power Ratings listed in this update replace any published previously, and should be used in your games. A unit's Power Rating is based on the number of models in that unit; to determine its Power Rating, simply look at the entry for that unit and the corresponding Power Rating for the number of models in that unit. Remember that an Understrength unit has the same Power Rating as a minimum sized unit.

Sometimes, a unit's entry will have a Power Rating that is calculated 'per model'. Where this is the case, the Power Rating of the unit is simply this number multiplied by the number of models in that unit. Rarely, you will see an entry whose Power Rating is calculated as '+X per model'. In these cases, the Power Rating is equal to the minimum size, and then for each additional model above the minimum squad size included in that unit, increase that unit's Power Rating by the amount shown.

Occasionally, a unit will have two separate entries. This typically happens when a unit has the option to be equipped with particular wargear, such as jump packs or wings. Where this is the case, just be sure to use the entry that corresponds to the wargear equipped on your unit. If a unit can contain any models that have a substantially different power, these will be denoted within the entry by naming that model, which will have a '+X per model' on its line. Each time you include such a model in a unit, then its Power Rating is increased by the amount shown.

POWER RATING UPDATE 2020

FORGE WORLD ADEPTUS ASTARTES

Welcome to the 2020 Power Rating update for Forge World Adeptus Astartes and Grey Knights. This update contains the most up-to-date Power Ratings for units that should be used in your games of Warhammer 40,000.

Since writing the latest edition of Warhammer 40,000 we have been working tirelessly to review and update the Power Ratings of every single unit in the 41st Millennium in order to take into account all the changes introduced. For example, we have introduced Blast weapons, overhauled how battlefields and terrain function, and let's not forget that vehicles and monsters have become substantially better – being able to move and fire heavy weapons at full effect, and even shoot while enemy models are within Engagement Range of them! I'm sure you can see that together, these changes affect the relative efficacy of certain models and weapons, hence the need for a review. This monolithic task would have been impossible without the dedication and stalwart advice of our playtesting teams, who have our eternal thanks.

The Power Ratings listed in this update replace any published previously, and should be used in your games. A unit's Power Rating is based on the number of models in that unit; to determine its Power Rating, simply look at the entry for that unit and the corresponding Power Rating for the number of models in that unit. Remember that an Understrength unit has

the same Power Rating as a minimum sized unit.

Sometimes, a unit's entry will have a Power Rating that is calculated 'per model'. Where this is the case, the Power Rating of the unit is simply this number multiplied by the number of models in that unit. Rarely, you will see an entry whose Power Rating is calculated as '+X per model'. In these cases, the Power Rating is equal to the minimum size, and then for each additional model above the minimum squad size included in that unit, increase that unit's Power Rating by the amount shown.

Occasionally, a unit will have two separate entries. This typically happens when a unit has the option to be equipped with particular wargear, such as jump packs or wings. Where this is the case, just be sure to use the entry that corresponds to the wargear equipped on your unit. If a unit can contain any models that have a substantially different power, these will be denoted within the entry by naming that model, which will have a '+X per model' on its line. Each time you include such a model in a unit, then its Power Rating is increased by the amount shown.

– Robin Cruddace and the Warhammer 40,000 Rules Team

POWER RATING UPDATE 2020

FORGE WORLD XENOS

Welcome to the 2020 Power Rating update for Asuryani, Drukhari, Necrons, Orks, T'au Empire and Tyranids. This update contains the most up-to-date Power Ratings for units that should be used in your games of Warhammer 40,000.

Since writing the latest edition of Warhammer 40,000 we have been working tirelessly to review and update the Power Ratings of every single unit in the 41st Millennium in order to take into account all the changes introduced. For example, we have introduced Blast weapons, overhauled how battlefields and terrain function, and let's not forget that vehicles and monsters have become substantially better – being able to move and fire heavy weapons at full effect, and even shoot while enemy models are within Engagement Range of them! I'm sure you can see that together, these changes affect the relative efficacy of certain models and weapons, hence the need for a review. This monolithic task would have been impossible without the dedication and stalwart advice of our playtesting teams, who have our eternal thanks.

The Power Ratings listed in this update replace any published previously, and should be used in your games. A unit's Power Rating is based on the number of models in that unit; to determine its Power Rating, simply look at the entry for that unit and the corresponding Power Rating for the number of

models in that unit. Remember that an Understrength unit has the same Power Rating as a minimum sized unit.

Sometimes, a unit's entry will have a Power Rating that is calculated 'per model'. Where this is the case, the Power Rating of the unit is simply this number multiplied by the number of models in that unit. Rarely, you will see an entry whose Power Rating is calculated as '+X per model'. In these cases, the Power Rating is equal to the minimum size, and then for each additional model above the minimum squad size included in that unit, increase that unit's Power Rating by the amount shown.

Occasionally, a unit will have two separate entries. This typically happens when a unit has the option to be equipped with particular wargear, such as jump packs or wings. Where this is the case, just be sure to use the entry that corresponds to the wargear equipped on your unit. If a unit can contain any models that have a substantially different power, these will be denoted within the entry by naming that model, which will have a '+X per model' on its line. Each time you include such a model in a unit, then its Power Rating is increased by the amount shown.

POWER RATING UPDATE 2020

GREY KNIGHTS

Welcome to the 2020 Power Rating update for Grey Knights. This update contains the most up-to-date Power Ratings for units that should be used in your games of Warhammer 40,000.

Since writing the latest edition of Warhammer 40,000 we have been working tirelessly to review and update the Power Ratings of every single unit in the 41st Millennium in order to take into account all the changes introduced. For example, we have introduced Blast weapons, overhauled how battlefields and terrain function, and let's not forget that vehicles and monsters have become substantially better – being able to move and fire heavy weapons at full effect, and even shoot while enemy models are within Engagement Range of them! I'm sure you can see that together, these changes affect the relative efficacy of certain models and weapons, hence the need for a review. This monolithic task would have been impossible without the dedication and stalwart advice of our playtesting teams, who have our eternal thanks.

The Power Ratings listed in this update replace any published previously, and should be used in your games. A unit's Power Rating is based on the number of models in that unit; to determine its Power Rating, simply look at the entry for that unit and the corresponding Power Rating for the number of models in that unit. Remember that an Understrength unit has the same Power Rating as a minimum sized unit.

Sometimes, a unit's entry will have a Power Rating that is calculated 'per model'. Where this is the case, the Power Rating of the unit is simply this number multiplied by the number of models in that unit. Rarely, you will see an entry whose Power Rating is calculated as '+X per model'. In these cases, the Power Rating is equal to the minimum size, and then for each additional model above the minimum squad size included in that unit, increase that unit's Power Rating by the amount shown.

Occasionally, a unit will have two separate entries. This typically happens when a unit has the option to be equipped with particular wargear, such as jump packs or wings. Where this is the case, just be sure to use the entry that corresponds to the wargear equipped on your unit. If a unit can contain any models that have a substantially different power, these will be denoted within the entry by naming that model, which will have a '+X per model' on its line. Each time you include such a model in a unit, then its Power Rating is increased by the amount shown.

– Robin Cruddace and the Warhammer 40,000 Rules Team

POWER RATING UPDATE 2020

HARLEQUINS AND YNNARI

Welcome to the 2020 Power Rating update for Harlequins and Ynnari. This update contains the most up-to-date Power Ratings for units that should be used in your games of Warhammer 40,000.

Since writing the latest edition of Warhammer 40,000 we have been working tirelessly to review and update the Power Ratings of every single unit in the 41st Millennium in order take into account all the changes introduced. For example, we have introduced Blast weapons, overhauled how battlefields and terrain function, and let's not forget that vehicles and monsters have become substantially better – being able to move and fire heavy weapons at full effect, and even shoot while enemy models are within Engagement Range of them! I'm sure you can see that together, these changes affect the relative efficacy of certain models and weapons, hence the need for a review. This monolithic task would have been impossible without the dedication and stalwart advice of our playtesting teams, who have our eternal thanks.

The Power Ratings listed in this update replace any published previously, and should be used in your games. A unit's Power Rating is based on the number of models in that unit; to determine its Power Rating, simply look at the entry for that unit and the corresponding Power Rating for the number of

models in that unit. Remember that an Understrength unit has the same Power Rating as a minimum sized unit.

Sometimes, a unit's entry will have a Power Rating that is calculated 'per model'. Where this is the case, the Power Rating of the unit is simply this number multiplied by the number of models in that unit. Rarely, you will see an entry whose Power Rating is calculated as '+X per model'. In these cases, the Power Rating is equal to the minimum size, and then for each additional model above the minimum squad size included in that unit, increase that unit's Power Rating by the amount shown.

Occasionally, a unit will have two separate entries. This typically happens when a unit has the option to be equipped with particular wargear, such as jump packs or wings. Where this is the case, just be sure to use the entry that corresponds to the wargear equipped on your unit. If a unit can contain any models that have a substantially different power, these will be denoted within the entry by naming that model, which will have a '+X per model' on its line. Each time you include such a model in a unit, then its Power Rating is increased by the amount shown.

POWER RATING UPDATE 2020

SPACE MARINES

Welcome to the 2020 Power Rating update for Space Marines. This update contains the most up-to-date Power Ratings for units that should be used in your games of Warhammer 40,000.

Since writing the latest edition of Warhammer 40,000 we have been working tirelessly to review and update the Power Ratings of every single unit in the 41st Millennium in order to take into account all the changes introduced. For example, we have introduced Blast weapons, overhauled how battlefields and terrain function, and let's not forget that vehicles and monsters have become substantially better – being able to move and fire heavy weapons at full effect, and even shoot while enemy models are within Engagement Range of them! I'm sure you can see that together, these changes affect the relative efficacy of certain models and weapons, hence the need for a review. This monolithic task would have been impossible without the dedication and stalwart advice of our playtesting teams, who have our eternal thanks.

The Power Ratings listed in this update replace any published previously, and should be used in your games. A unit's Power Rating is based on the number of models in that unit; to determine its Power Rating, simply look at the entry for that unit and the corresponding Power Rating for the number of models in that unit. Remember that an Understrength unit has the same Power Rating as a minimum sized unit.

Sometimes, a unit's entry will have a Power Rating that is calculated 'per model'. Where this is the case, the Power Rating of the unit is simply this number multiplied by the number of models in that unit. Rarely, you will see an entry whose Power Rating is calculated as '+X per model'. In these cases, the Power Rating is equal to the minimum size, and then for each additional model above the minimum squad size included in that unit, increase that unit's Power Rating by the amount shown.

Occasionally, a unit will have two separate entries. This typically happens when a unit has the option to be equipped with particular wargear, such as jump packs or wings. Where this is the case, just be sure to use the entry that corresponds to the wargear equipped on your unit. If a unit can contain any models that have a substantially different power, these will be denoted within the entry by naming that model, which will have a '+X per model' on its line. Each time you include such a model in a unit, then its Power Rating is increased by the amount shown.

POWER RATING UPDATE 2020

SPACE MARINES SUPPLEMENTS

Welcome to the 2020 Power Rating update for Black Templars, Ultramarines, White Scars, Iron Hands, Imperial Fists, Salamanders and Raven Guard. This update contains the most up-to-date Power Ratings for units that should be used in your games of Warhammer 40,000.

Since writing the latest edition of Warhammer 40,000 we have been working tirelessly to review and update the Power Ratings of every single unit in the 41st Millennium in order to take into account all the changes introduced. For example, we have introduced Blast weapons, overhauled how battlefields and terrain function, and let's not forget that vehicles and monsters have become substantially better – being able to move and fire heavy weapons at full effect, and even shoot while enemy models are within Engagement Range of them! I'm sure you can see that together, these changes affect the relative efficacy of certain models and weapons, hence the need for a review. This monolithic task would have been impossible without the dedication and stalwart advice of our playtesting teams, who have our eternal thanks.

The Power Ratings listed in this update replace any published previously, and should be used in your games. A unit's Power Rating is based on the number of models in that unit; to determine its Power Rating, simply look at the entry for that unit and the corresponding Power Rating for the number of

models in that unit. Remember that an Understrength unit has the same Power Rating as a minimum sized unit.

Sometimes, a unit's entry will have a Power Rating that is calculated 'per model'. Where this is the case, the Power Rating of the unit is simply this number multiplied by the number of models in that unit. Rarely, you will see an entry whose Power Rating is calculated as '+X per model'. In these cases, the Power Rating is equal to the minimum size, and then for each additional model above the minimum squad size included in that unit, increase that unit's Power Rating by the amount shown.

Occasionally, a unit will have two separate entries. This typically happens when a unit has the option to be equipped with particular wargear, such as jump packs or wings. Where this is the case, just be sure to use the entry that corresponds to the wargear equipped on your unit. If a unit can contain any models that have a substantially different power, these will be denoted within the entry by naming that model, which will have a '+X per model' on its line. Each time you include such a model in a unit, then its Power Rating is increased by the amount shown.

POWER RATING UPDATE 2020

TALONS OF THE EMPEROR

Welcome to the 2020 Power Rating update for Adeptus Custodes and Sisters of Silence. This update contains the most up-to-date Power Ratings for units that should be used in your games of Warhammer 40,000.

Since writing the latest edition of Warhammer 40,000 we have been working tirelessly to review and update the Power Ratings of every single unit in the 41st Millennium in order to take into account all the changes introduced. For example, we have introduced Blast weapons, overhauled how battlefields and terrain function, and let's not forget that vehicles and monsters have become substantially better – being able to move and fire heavy weapons at full effect, and even shoot while enemy models are within Engagement Range of them! I'm sure you can see that together, these changes affect the relative efficacy of certain models and weapons, hence the need for a review. This monolithic task would have been impossible without the dedication and stalwart advice of our playtesting teams, who have our eternal thanks.

The Power Ratings listed in this update replace any published previously, and should be used in your games. A unit's Power Rating is based on the number of models in that unit; to determine its Power Rating, simply look at the entry for that unit and the corresponding Power Rating for the number of

models in that unit. Remember that an Understrength unit has the same Power Rating as a minimum sized unit.

Sometimes, a unit's entry will have a Power Rating that is calculated 'per model'. Where this is the case, the Power Rating of the unit is simply this number multiplied by the number of models in that unit. Rarely, you will see an entry whose Power Rating is calculated as '+X per model'. In these cases, the Power Rating is equal to the minimum size, and then for each additional model above the minimum squad size included in that unit, increase that unit's Power Rating by the amount shown.

Occasionally, a unit will have two separate entries. This typically happens when a unit has the option to be equipped with particular wargear, such as jump packs or wings. Where this is the case, just be sure to use the entry that corresponds to the wargear equipped on your unit. If a unit can contain any models that have a substantially different power, these will be denoted within the entry by naming that model, which will have a '+X per model' on its line. Each time you include such a model in a unit, then its Power Rating is increased by the amount shown.

T'AU EMPIRE

Welcome to the 2020 Power Rating update for T'au Empire. This update contains the most up-to-date Power Ratings for units that should be used in your games of Warhammer 40,000.

Since writing the latest edition of Warhammer 40,000 we have been working tirelessly to review and update the Power Ratings of every single unit in the 41st Millennium in order to take into account all the changes introduced. For example, we have introduced Blast weapons, overhauled how battlefields and terrain function, and let's not forget that vehicles and monsters have become substantially better – being able to move and fire heavy weapons at full effect, and even shoot while enemy models are within Engagement Range of them! I'm sure you can see that together, these changes affect the relative efficacy of certain models and weapons, hence the need for a review. This monolithic task would have been impossible without the dedication and stalwart advice of our playtesting teams, who have our eternal thanks.

The Power Ratings listed in this update replace any published previously, and should be used in your games. A unit's Power Rating is based on the number of models in that unit; to determine its Power Rating, simply look at the entry for that unit and the corresponding Power Rating for the number of models in that unit. Remember that an Understrength unit has the same Power Rating as a minimum sized unit.

Sometimes, a unit's entry will have a Power Rating that is calculated 'per model'. Where this is the case, the Power Rating of the unit is simply this number multiplied by the number of models in that unit. Rarely, you will see an entry whose Power Rating is calculated as '+X per model'. In these cases, the Power Rating is equal to the minimum size, and then for each additional model above the minimum squad size included in that unit, increase that unit's Power Rating by the amount shown.

Occasionally, a unit will have two separate entries. This typically happens when a unit has the option to be equipped with particular wargear, such as jump packs or wings. Where this is the case, just be sure to use the entry that corresponds to the wargear equipped on your unit. If a unit can contain any models that have a substantially different power, these will be denoted within the entry by naming that model, which will have a '+X per model' on its line. Each time you include such a model in a unit, then its Power Rating is increased by the amount shown.

POWER RATING UPDATE 2020

UNALIGNED FORTIFICATIONS

Welcome to the 2020 Power Rating update for Unaligned Fortifications. This update contains the most up-to-date Power Ratings for units that should be used in your games of Warhammer 40,000.

Since writing the latest edition of Warhammer 40,000 we have been working tirelessly to review and update the Power Ratings of every single unit in the 41st Millennium in order to take into account all the changes introduced. For example, we have introduced Blast weapons, overhauled how battlefields and terrain function, and let's not forget that vehicles and monsters have become substantially better – being able to move and fire heavy weapons at full effect, and even shoot while enemy models are within Engagement Range of them! I'm sure you can see that together, these changes affect the relative efficacy of certain models and weapons, hence the need for a review. This monolithic task would have been impossible without the dedication and stalwart advice of our playtesting teams, who have our eternal thanks.

The Power Ratings listed in this update replace any published previously, and should be used in your games. A unit's Power Rating is based on the number of models in that unit; to determine its Power Rating, simply look at the entry for that unit and the corresponding Power Rating for the number of models in that unit. Remember that an Understrength unit has

the same Power Rating as a minimum sized unit.

Sometimes, a unit's entry will have a Power Rating that is calculated 'per model'. Where this is the case, the Power Rating of the unit is simply this number multiplied by the number of models in that unit. Rarely, you will see an entry whose Power Rating is calculated as '+X per model'. In these cases, the Power Rating is equal to the minimum size, and then for each additional model above the minimum squad size included in that unit, increase that unit's Power Rating by the amount shown.

Occasionally, a unit will have two separate entries. This typically happens when a unit has the option to be equipped with particular wargear, such as jump packs or wings. Where this is the case, just be sure to use the entry that corresponds to the wargear equipped on your unit. If a unit can contain any models that have a substantially different power, these will be denoted within the entry by naming that model, which will have a '+X per model' on its line. Each time you include such a model in a unit, then its Power Rating is increased by the amount shown.
